

Fabrication and Characterization of ZnO Nanowire Transistors

Filesize: 4.09 MB

Reviews

This published publication is fantastic. it had been writtern very perfectly and useful. Once you begin to read the book, it is extremely difficult to leave it before concluding.

(Junius Herman)

FABRICATION AND CHARACTERIZATION OF ZNO NANOWIRE TRANSISTORS

VDM Verlag Dez 2008, 2008. Taschenbuch. Book Condition: Neu. 220x150x8 mm. Neuware - Recently, a variety of physical and chemical methods have been used to synthesize and obtain 1- dimensional semiconductor nanostructures. For the cause of easier nanostructure formation and device applications, we begin this study with the investigation in growth mechanism and well- controlled condition to synthesize 1-dimensional ZnO nanowires. For the low dimensional structure of nanowire, the manipulation of individual nanowire has become an unsettled and crucial issue. Therefore, we use a printing method to realize the nanowire alignment in broad classes. In addition, our investigators would explore the correlation between the quality of 1-dimensional material and electronic transport properties of ZnO nanowire-based transistors. In the fabrication of nanowire transistors, the existing common method of dielectrophoresis (DEP) process would impose a contact problem, and an additional or subsequent metallization is necessary for the electronic connection. Therefore, we will develop a novel method to simultaneously obtain aligned nanowire arrays and device patterning by combining DEP and imprinting processes. 132 pp. Englisch.
