

## Digest of Data Collected Before the Year 1908; Relating to the Sanitary Condition of New York Harbor

By New York Metropolitan Commission

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1909 Excerpt: .with the intensity of sewage pollution. It would be unfair, however, to assume that the exceptionally small amounts of ammonia found in some of the samples indicated exceptional freedom from sewage. Such a conclusion would be in opposition to all evidence collected from other quarters. Considering this matter as a whole, it probably is best to take no account of the determinations of ammonia made in 1907, since it is practically certain that they were inaccurate. 3-CHLORINE IN THE WATER (a) Value of Results.--Taken separately, or in connection with the results of previous analyses of the New York Bay Pollution Commission, the chlorine analyses made for the Metropolitan Sewerage Commission constitute a fairly large mass of data, and throw important light upon the admixture of sea water and river water in the harbor and its various tributaries. The difference in salinity at points more or less...
