From which, differentiating with respect to x and to z , and remembering that for each segment of every such sphere, $r r_2 = 2rz$, where r is the radius of the sphere, we get, after some trifling reductions, $\frac{1}{r} = \frac{1}{r_2} - \frac{1}{r} \cos 4$, which manifestly prove the two properties in question. The fixed point through which, as shown by the preceding values of its components parallel and perpendicular to the plane of the lamina, the resultant attraction passes, for each segment of the sphere, is easily seen to be that harmonically conjugate to the centre of the sphere with respect to the segment of the axis of the lamina intercepted between the pole of the opposite segment and the vertex of the cone enveloping the sphere along the circumference of the lamina. 5338. (By S. Roberts, M.A.)--If two surfaces of the degrees m, n have a common isolated right line and are otherwise general, show that they touch one another at $mn + n - 2$ points on the line. 6055. (By H. L. Orchard, L.C.P.)--A spherical soap-bubble is electrified in such a manner that it is just..
