Createspace Independent Publishing Platform, United States, 2015. Paperback. Book Condition: New. 254 x 203 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.There are a number of topics within mathematics which have a direct relevance to computing and IT. Some of these topics form the basis of how a computer processes data, some are used at a higher level to enable a program to perform a required function, and others are algorithmic and can be easily implemented within a computer program. This books attempts to bring together many of these mathematical concepts and present them in a way that is relevant to those studying ICT and computing qualifications, and to those who would like to start to explore this subject for themselves. This book not only demonstrates how to perform the relevant calculations, but puts the topics into the context of computing. Explanations include simple diagrams, tables of data, worked examples and questions with worked answers to allow the reader to check their understanding of a topic. Some of the explanations include the use of algorithms and flowcharts as well as coded examples using JavaScript. Additionally, throughout this book there are examples to illustrate how the mathematical concepts are used within computing and IT. Please note that this book is purely an introduction to this subject and many of the concepts are described in their simplest form. The reader may then wish to go and explore a specific topic in more depth. The following is a list of the topics which are covered by the book: - Algorithms: Steps and Flowcharts. - Matrices: Operations, Transformations, Simultaneous Equations, Maps and Graphs. - Sequences and Series: Arithmetic, Geometric, Recursive Algorithms, Fibonacci Sequence, Golden Ratio. - Searching and Sorting Algorithms: Bubble Sort, Quicksort and Binary Search. - Probability: Tree Diagrams,...
