RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 154 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 Excerpt: . . . pump. This last type, with a cylinder 6x24 inches developing 11, 300 ft. -lbs. each stroke, is capable of working a large gate, or even several, simultaneously. In order to synchronize alternators running in parallel, the governors must be controlled, and it is desirable to do this from the switchboard. This is accomplished in the Lombard governor by attaching to it a small electric motor which lengthens or shortens the valve stem, thus varying the speed. The direction of rotation of the motor is determined by two push-buttons on the switchboard, which enables the frequency and phase of the alternators to be regulated exactly. A pin-clutch operated by a small hand wheel also enables the gates to be worked by hand with the large wheel shown in Fig. 73b. The Sturges Water-Wheel Governor is similar in principle to the Lombard type, the gate mechanism being operated by water or oil pressure acting on a piston and controlled by a valve and centrifugal governor. In this case, however, the piston is rectangular and mounted radially on a shaft whose axis coincides with that of the cylinder. This shaft is connected to the gate by gearing so that the motion of the piston, which swings through 315, causes it to open or close. This governor may also be equipped with a supplementary electric-motor control similar to the Lombard device. The Woodward Water-Wheel Governor operates mechanically and differs from the two foregoing forms in which the movement of the...
